DRESS FOR THE WEATHER!

We do go outside for recess on cold days.

It is flu season! Protect yourself and others by practicing hand hygiene, disinfecting high touch surfaces, and staying away from those with the flu when possible. Symptoms of the flu include a fever, cough, body aches, headache, stuffy nose, and fatigue. Vomiting and diarrhea may also occur but are more common in children.

With the flu, a cough often accompanies and can linger for 2-3 weeks. This can create a sore throat and uncomfortable mucus. Listed below are some remedies that are recommended by the Mayo Clinic to help with a lingering cough:

1. Drink plenty of fluids! Water and other fluids help thin the mucus in your throat which makes it easier to cough up and get rid of. Water and warm fluids such as broth can also soothe a sore throat.
2. Use a cool mist humidifier or take a warm shower. Moisture in the air also helps to loosen mucus and decrease congestion.
3. Try a teaspoon of honey before bed if older than 1 year of age. Honey includes anti-inflammatory properties and works to create a barrier on the throat to help both coughing and soreness.

A NOTE ON COUGH DROPS IN THE CLASSROOM

If you want to send cough drops into the school, please let your child's teacher or myself (madison.compton@bloomcarroll.org) know so that I can keep them in the clinic. In doing so, I can regulate the amount of cough drops given during the day and make sure that they are not shared with other students who could have potential food dye or medication allergies. Cough drops that contain menthol are medicated and require a medication form to be filled out. Please send in only lozenges as the cough drop pops/suckers are often mistaken for candy by other students. :) Thank you so much for your cooperation!
